## #98217 Access Rights Issue - Particular Folder

---

**Arjun Gowda K R**

A , reported 4 months ago

Hi Team,

We have restricted access to particular folder in studio, so that no developer should modify the object. Currently developer don't have permission for edit or delete or import or modify the object, but still they can import the object into studio. can you please let us know how to restrict the access for importing the object ?

thanks,

Arjun Gowda

Hi Arjun,

Thank you for reaching out to the Blue Prism Customer Support.

I'm currently investigating your query and will keep you posted as soon as I have an update.

Hi Arjun,

Hope you're doing well.

Please note that Blue Prism exclusively restrict access for importing or exporting the objects and processes under User Roles level.

## Security - User Roles

**Roles**

- Alert Subscribers
- Developers
- Developers - No Import Export
- Process Administrators
- Release Managers
- Runtime Resources
- Schedule Managers
- System Administrators
- Testers
- Web Service Consumers

**Permissions**

- Analytics
- Control Room
- Object Studio
- Process Alerts
- Process Studio
  - Create Process
  - Delete Process
  - Edit Process
  - Edit Process Groups
  - Execute Process
  - Execute Process as Web Service
  - Export Process
  - Import Process
  - Manage Process Access Rights
  - View Process Definition
- Release Manager
- Resources
- Scheduler

**Users**

Full Name	Valid From	Valid To	Password Expiry	Last Signed In
user	18/05/2020 11:21:04 PM	18/05/2021 12:00:00 AM	18/06/2020 12:00:00 AM	18/05/2020 11:51:10 PM

It does not restrict access from importing or exporting the objects and processes under folder levels individually. In other words, once you limit the import/export access, it applies through all folders and subfolders.

However, for this specific scenario, I kindly recommend logging the issue as an enhancement request on the **Blue Prism Ideas Community Portal**. (<https://community.blueprism.com/ideas/ideas>).

The Product team gather and assess the ideas and necessities submitted here, and they will be considered for the inclusion in future Blue Prism releases.
