Intelligent Automation Solutions

SS&C Chorus

Accelerate straight-through processing in complex, highly regulated environments

Technology that fits the way you work

High transaction volumes. Disconnected legacy systems. Complex business processes. Businesses face these challenges every day, not to mention expectations to reduce costs, stay on top of operational risks, monitor compliance and keep up with regulatory changes. Sound familiar?

Achieving those goals means bringing innovation into your operations without increasing risk and have technology fit the way you work, rather than you working around it.

SS&C Chorus' integrated intelligent automation platform combines intelligent workflow management, digital process automation, low-code development, machine learning, and computer vision powered document processing to enable you to achieve your business objectives quickly and cost-effectively.

Powering customer journeys intelligently

Built on SS&C's reputation as an end-to-end solutions provider, Chorus is purpose-built for enabling businesses in complex, highly-regulated industries, such as banking, financial services, insurance and healthcare, to manage risk, gain transparency and reduce compliance exposure through automation.

In fact, most of the leading companies in those industries trust Chorus to run their most critical customer-facing processes and continually deliver value at scale.

They're using Chorus BPM to help transform operations with digital process automation, case management, omni-channel intake, and operational analytics.

With Chorus Document Automation, our customers digitize, classify and extract information from paper easily and automatically with artificial intelligence and machine learning.
